

Project to improve the skills of radiology technologists in the Kingdom of Cambodia

- ① In Cambodia, new radiological equipment has been introduced and more advanced examination techniques are required, but they are not fully available due to the lack of skills of radiology technologists.
- ② To provide technical support to radiologists in the Kingdom of Cambodia to improve the quality of imaging examinations.
- ③ To improve the knowledge and skills of radiology technologists in imaging examinations through basic knowledge training and hands-on technical training using actual equipment. In addition, at Maternal and Child Health Center Hospitals that accept intern radiology technologist trainees, educational materials for trainees will be created to reduce differences in education.
- ④ The quality of imaging examinations should be improved by improving the skills of radiology technologists. Also, by setting certain standards for the education of trainees, it is expected that the technical skills of radiology technologists as a whole will be improved.
