

Building up a Core Competence In Radiologic Technology and Safety Practices in Laos

- ① The University of Health Sciences, Lao PDR is the only educational institution to foster radiological technologists in Laos, however, educational infrastructure is not well-developed.
- ② To improve and consolidate the basic knowledge and skills of quality and safety management for medical imaging apparatus among university faculties and students, and health professionals working in the radiology departments.
- ③ The JSRT is the only professional association in radiological technology organization and is involved in standardization of radiographic techniques and management of equipment. Through this project, comprehensive educational and technical training can be provided.
- ④ The UHS will become an educational hub for quality and safety management with closely working with five leading hospitals in Vientiane capital
