

# Philippines National Dissemination Project of Dialysis Fluid Purification & Control

- Awareness of the importance of dialysis fluid purification & control has been increased, and the system has been established to be able to give guidance at home country. While, there is a demand to prepare an environment in which ET can be easily measured.
- Shoenkai in cooperation with PSN, conduct a training on dialysis purification & control technology at dialysis institutions, disseminate its technology and establish an environment where ET required for its control can be easily measured. In addition, we support the Ministry of Health (DOH), which is under examination for revision of dialysis guidelines, in cooperation with PSN.
- Through cooperation with PSN for training organization, it is expected that Japanese style management system of dialysis fluid will be disseminated, and Japanese medical equipment and technology will widely spread all over the Philippines.

## 〈Tentative Training Schedule〉

August: Expert dispatch (4 persons)

- Coordination with PSN for training, Discussion with PSN on ET measurement
- Discussion with DOH
- Follow-up training for red cross

October: Inspection (2 persons)

- Inspection of dialysis fluid purification management in Tokatsu Clinic Hospital
- Inspection in Nipro training center
