

Project for promoting health screening program in northern Vietnam

- In Vietnam, the disease structure is shifting from infectious disease to non-infectious disease. In addition, since company medical examination has been legalized, standardized high quality medical examination is required.
- Mediva Inc. has signed an MOU with Bach Mai Hospital to open a health screening center. We will conduct dispatch of experts three times and one training session in Japan (for doctors, nurses and clerks of outpatient department).
- We aim to establish a health screening center in Hanoi that can provide Japanese standard treatment and medical technology, and build a network in northern Vietnam with this center.

< Training schedule >

- Jul, Dispatch of Experts (3ppl)
