

## Promotion of Proper Use of Medicines with Medication Guiding Tools through Clinical Pharmacists Intervention in Vietnam

- In Vietnam, while most hospitals manage hospital-based clinical pharmacy activities (e.g., dispensing medicines and providing doctors/nurses with medicines information), the direct patient care by clinical pharmacists (CP) is limited, and patient-specific clinical pharmacy services need to be improved.
- NCGM Dept. of Pharmacy, which provides medication guidance in clinical practices, and JPMA, which has many explanatory materials for patients, will collaborate with RAD-AR to train how to create and utilize medication guiding tools which CPs including other healthcare professionals in Vietnam could use for patients while holding training activities for acquiring know-how on overall medication guidance by training in Japan and Vietnam and online as well.
- A base will be established so that CPs in Vietnam could independently create and update tools after completing the project. Furthermore, at hospitals widely in the northern part of Vietnam as well as Bach Mai Hospital, medication guidance will be practiced by CPs with tools.

### < Schedule for FY2021 >

#### July Online Training

- Introduction of project and Preparation for participation in training

#### July-Sep Preparation for training

- Discussion of expansion of Medication Guiding Tools (including expansion of disease area) and environmental development for utilization

#### Oct Training in Japan (6 pax)

- Training/Practical Training on the Creation of Tools
- Discussion/training on utilization of Tools and development of environment

- Education by NCGM CPs and RAD-AR

#### Jan Follow-up Training in Vietnam (3 pax NCGM +3 pax JPMA)

- Observation and evaluation of the status of Tools expansion and intervention with Tools
- Dissemination of Tools through seminars to other hospitals
